

# Sustainable and Cost Effective Land Restoration Options

## Proven Techniques

If you have land that needs to be reclaimed or restored then Envar can provide a custom designed, innovative and sustainable solution that is economically viable, environmentally beneficial and practical.

Our proven techniques demonstrate it is possible to create soils where none exist and tailor the quality of a restoration to match the proposed land use or habitat.

## Typical Clients include owners of

- Soil tips
- Quarries
- Landfills
- Contaminated land
- Bulldozed sites

## Custom Designed Solutions

Contaminated and brownfield sites suffer from a wide range of conditions that pose limitations to their suitability for beneficial use. The appropriate use of beneficial organic and inorganic by-products, carefully controlled and matched to the site, can often provide the most suitable land reclamation solution.

## Environmental Solutions

By re-using and recycling the waste and by-products from industry and agriculture, Envar can provide a sustainable and cost effective material for land restoration.

## Land Remediation Services

- Site clearance, drainage and re-profiling
- Provision of suitable restoration materials
- Incorporation of soil making materials
- Establishment of vegetation (amenity grass, biomass, forestry)
- Aftercare provision management
- Comprehensive vegetation management
- Expert liaison with EA, planners and other public bodies
- Full project management service
